“Tawhidi Methodology and Its Empirical Application”

Tawhid means Oneness of God (Allah) as the domain of complete, absolute and perfect knowledge and the divine law. Tawhid as the seat of the divine law in the Qur’an establishes a distinct methodology premised on its epistemology and ontology. This methodology in turn establishes the Tawhidi world-system with its character of unity of knowledge that is distinct from any other world-system. The Tawhidi methodology addresses the generality and specificity of issues and problem within its generalized systemic worldview of unity.
